

DATA HANDOFF AGREEMENT

Skillet, Inc. (“Acquirer”) — Pemberton Press LLC (“Provider”)

Effective Date: 2026-01-15

§1 Scope

This document governs the transfer, normalization, and ingestion of recipe content and associated metadata from Provider to Acquirer pursuant to the Asset Purchase Agreement dated 2025-11-30 (the “APA”). This document supplements but does not supersede the APA. In the event of a direct conflict between this document and the APA, the APA controls; otherwise, the more specific provision applies.

§2 Data Specifications

§2.1 Brand Name Canonicalization.

All branded products referenced in the consolidated dataset shall be normalized to the canonical brand name forms enumerated in **Schedule A**. Canonical forms are case-, punctuation-, and whitespace-sensitive. Variant spellings, common misspellings, and informal abbreviations encountered in source data shall be mapped to their canonical equivalents. Brands not enumerated in Schedule A shall be normalized using consistent rules at Acquirer’s discretion and flagged for review in the unresolved manifest.

§2.2 Recipe Identifier Namespacing.

Recipe identifiers issued by Provider’s content management system are **not** globally unique with respect to identifiers issued by Acquirer’s production database. The two systems share an integer ID space beginning at 1. Acquirer shall namespace all imported recipe identifiers (e.g., by prefixing with “pem_” or implementing a composite primary key (source, original_id)) prior to ingestion. **Failure to namespace will result in silent collision of unrelated recipes and is a material defect of the ingestion.**

§2.3 Dietary Flag Legend.

The dietary_flag field in Acquirer’s recipe schema uses single-character codes. The current legend is enumerated in **Schedule B**. Records with created_date prior to **2023-06-15** use the legacy mapping in which V denotes “vegetarian” and VG denotes “vegan.” Records on or after that date use the current mapping in which V denotes “vegan” and VG denotes “vegetarian.” Acquirer shall apply the appropriate legend per record and is responsible for re-deriving unified semantics in the consolidated dataset.

§3 Inclusion Rules

§3.1 All recipes from the Provider catalog shall be included in the consolidated dataset, subject only to the validation requirements in §3.3. No editorial, sponsorship, or licensing-based exclusion is contemplated under this document.

§3.2 All seasonal and themed content (including holiday-tagged recipes) shall be preserved with original tagging.

§3.3 Recipes lacking either a title or any ingredients list shall be excluded and flagged for review.

§4 Attribution and Originality

All recipes shall preserve original author and source attribution where present in the source data. Recipes for which `internal_authored = true` are warranted by Provider to be original works owned by Provider, and Provider warrants that the publication of such recipes by Acquirer will not infringe any third-party copyright, trademark, or contractual right.

§5 Allergen and Dietary Compliance

Recipes containing any ingredient enumerated in **Schedule C** but tagged with a vegetarian or vegan dietary flag (under either legacy or current schema) shall be flagged for review prior to publication. **This is a compliance requirement and may not be silently corrected by Acquirer.** Where Acquirer determines that a flag is incorrect, Acquirer shall preserve the original record and add a separate review entry in the unresolved manifest, leaving final disposition to Provider's editorial team.

§6 Output Manifests

Acquirer shall produce, in addition to the consolidated dataset, an unresolved-items manifest enumerating every record that was excluded, flagged, or otherwise required human disposition. Each entry in the manifest shall provide sufficient context for an editorial reviewer to act, including but not limited to: the source identifier, the rule cited, and the proposed resolution.

SCHEDULE A — CANONICAL BRAND NAMES

The following brands are referenced in Provider's catalog. The canonical form is the form that shall appear in all consolidated outputs. Apostrophes are typographic (U+2019) where shown.

Canonical Form	Notes
Trader Joe's	Use curly apostrophe (U+2019)
Whole Foods Market	Full name; do not abbreviate
Land O'Lakes	One word, curly apostrophe
McCormick	Capital M, lowercase remainder
Hellmann's	Curly apostrophe
King Arthur Baking Company	Full name
Häagen-Dazs	Diacritics required
Bob's Red Mill	Curly apostrophe
Kerrygold	One word
Heinz	Single word
Kraft	Single word, not Kraft Heinz unless context demands
Cabot Creamery	Full name preferred
Vital Farms	Two words
Annie's	Curly apostrophe
Stonyfield	No 'e' in stony
Chobani	Single word
Clif Bar	One 'f' in Clif
RXBAR	All caps, single word
Califia Farms	Two words
Beyond Meat	Two words

This Schedule is representative of brands appearing in the v1 catalog. Brands not enumerated above shall be normalized at Acquirer's reasonable discretion and flagged in the unresolved manifest for review.

SCHEDULE B — DIETARY FLAG LEGEND

Current schema, effective **2023-06-15**:

Code	Meaning
V	Vegan
VG	Vegetarian
GF	Gluten-free
DF	Dairy-free
K	Kosher
H	Halal
P	Pescatarian

Legacy schema, applicable to records with `created_date` before **2023-06-15**:

Code	Meaning
V	Vegetarian
VG	Vegan
GF	Gluten-free
DF	Dairy-free
K	Kosher
H	Halal
P	Pescatarian

SCHEDULE C — VEGETARIAN/VEGAN COMPLIANCE: RESTRICTED INGREDIENTS

Recipes containing any of the following ingredients but tagged V or VG (current schema), or with `dietary_flag` indicating vegetarian/vegan under either schema, must be flagged for review in the unresolved manifest:

- anchovy
- anchovy paste
- chicken broth
- beef broth
- bone broth
- fish sauce
- oyster sauce
- Worcestershire sauce
- gelatin
- lard
- rennet
- shellac
- carmine
- isinglass
- suet
- bacon
- pancetta
- guanciale

Honey is *not* restricted under our policy, though we acknowledge ongoing community debate. Worcestershire sauce is restricted because most commercial brands contain anchovy. Gelatin is animal-derived; agar-agar is acceptable as a vegetarian/vegan substitute. Carmine (cochineal) is animal-derived and frequently appears in red-colored confections.
